AMENDMENTS TO THE CLAIMS

Please add the claims to read as follows, and cancel without prejudice or disclaimer to resubmission in a divisional or continuation application claims indicated as cancelled:

1-23 (Cancelled)

24. (New) An impact assessment unit comprising:

an interface connector operably connectable to a connector of a platform electronic system;

a resource allocation unit to negotiate access to resources associated with the platform electronic system; and

a controller to regulate communication with a smart munition using a receiver associated with the platform electronic system.

- 25. (New) The unit according to claim 24, wherein said resource allocation unit negotiates access to a human interface unit.
- 26. (New) The unit according to claim 25, wherein said human interface unit is an audio system.
- 27. (New) The unit according to claim 25, wherein said human interface unit is a visual display system.
- 28. (New) The unit according to claim 24, further comprising a processing unit for receiving and processing information from an onboard guidance system of said smart munition.

29. (New) The unit according to claim 28, wherein said processing unit is an external unit to

said impact assessment unit.

30. (New) The unit according to claim 29, wherein said resource allocation unit negotiates

access to said external processing unit.

31. (New) The unit according to claim 24, wherein said resource allocation unit negotiates

access to a transmitter to transmit a signal generated by said impact assessment unit in a

manner receivable by a receiving device of said smart munition;

32. (New) The unit according to claim 24, wherein said resource allocation unit negotiates

access to a receiver to receive a signal generated by said smart munition.

33. (New) The unit according to claim 32, wherein said receiver is a radiofrequency

receiver.

34. (New) The unit according to claim 33, wherein said radiofrequency receiver is inherent

to an electronic warfare system of the platform.

35. (New) The unit according to claim 32, wherein said radiofrequency signal is a

frequency radio signal of between 2 gigahertz and 2.6 gigahertz.

36. (New) The unit according to claim 24, wherein said resource allocation unit negotiates

access to resources associated with the platform electronic system through a resource

allocation controller on the platform.

37. (New) The unit according to claim 24, wherein said unit is placed on a monitoring unit.
